

Logography

The lambda is a function, a trajectory, and a change of perspective. One mark connects the human signature “sami” with the maker handle “kmab”.

One symbol, two signatures

HUMAN / EDITORIAL

Use sami for authored writing, personal introductions, talks, essays, and work where the person should arrive before the system.

MAKER / TECHNICAL

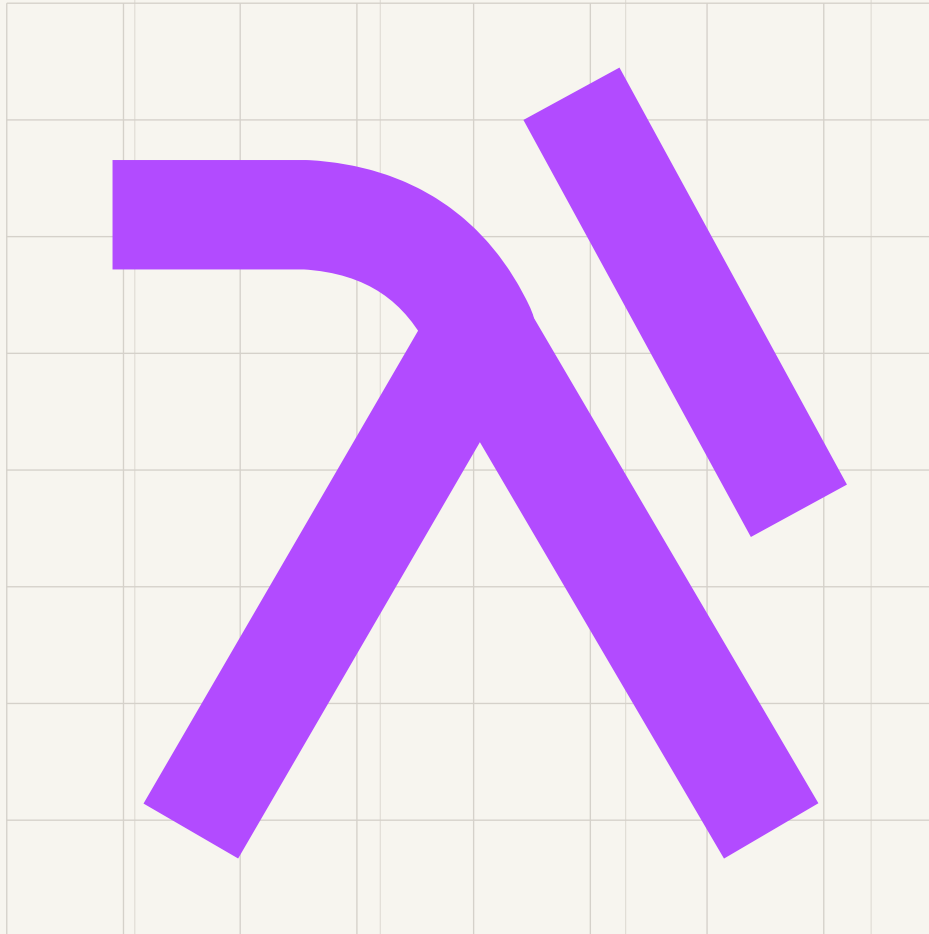

Use kmab for repositories, tools, experiments, games, terminal surfaces, favicons, and compact maker signatures.

Why lambda

- Mathematics: a native symbol for abstraction and reasoning.
- Programming: an anonymous function waiting for useful input.
- Motion: an angled path, suited to a performance-minded portfolio.
- Perspective: rotate it and the same form becomes the opening “k” of kmab.
- Signature: the detached upper stroke behaves like a timing split — a small signal that the work is still moving.

Construction

MASTER GRID / 128 UNITS

- Stroke weight: 15 units at a 128-unit master size.
- Square caps and square joins preserve a technical, cut-metal character.
- The detached stroke must remain detached; it is part of the identity.
- Do not redraw from a text glyph. Always use the supplied master SVG.

Primary lockup: λ + sami

The primary lockup is the default public-facing signature. The lambda carries the personal-best purple; the wordmark stays neutral so the symbol remains the focus.

DEFAULT USES

- Portfolio navigation and hero
- Essay or article byline
- Speaking slides and profile pages
- Personal stationery and introductions

Secondary lockup: rotated λ + mab

The lambda is rotated 90° counter-clockwise to behave as a “k”. Placed beside “mab”, the lockup reads as kmab while preserving the same source geometry.

DEFAULT USES

- Repository headers and READMEs
- Developer tools and terminal interfaces
- Game credits and compact signatures
- Project stamps, favicons, and build artifacts

Clear space and minimum size

Clear space X equals one quarter of the lambda submark height. Keep that space free of type, borders, imagery, and other marks.

MINIMUM DIGITAL SIZE

- Primary / secondary lockup: 120 px wide
- Submark: 20 px wide
- Badge: 32 px wide
- Below these sizes, use the supplied favicon or badge assets.

Color variants

PRIMARY / LIGHT

MONO INK

PRIMARY / DARK

MONO WHITE

Do / do not

DO

- Use supplied master files.
- Preserve proportions and clear space.
- Use monochrome on busy imagery.
- Keep the detached stroke visible.

DO NOT

- Stretch, skew, or add perspective.
- Add gradients, shadows, glow, or outlines.
- Recolor outside the approved palette.
- Rotate the primary lockup or detach its wordmark.
