

Color system

A dark technical neutral base, one personal-best purple, and two supporting signals for validated work and exploratory side quests.

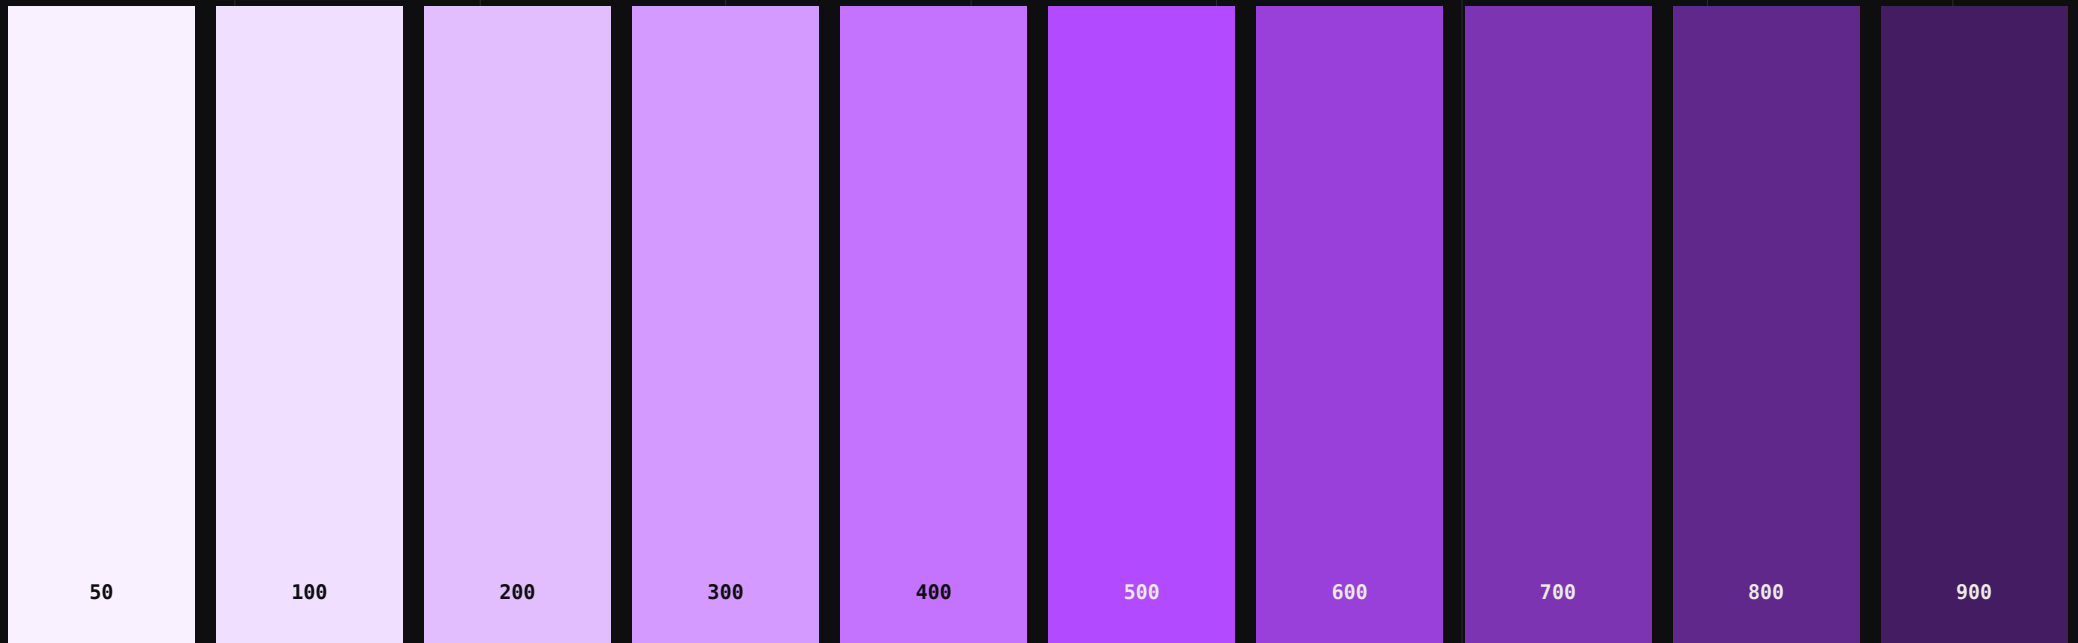

Color has a job

Purple is the identity signal. Green and amber are status colors borrowed from the performance language already present in the portfolio. They should classify work—not compete for attention.

Primary purple scale

Use 500 for the mark and active highlights. Use 300–400 for hover, focus, or large decorative areas. Use 700–900 for pressed states or subtle dark-on-dark depth.

Do not use purple 500 as small text on paper. It is suitable for large display text, UI highlights, borders, and the mark. For body copy on light backgrounds, use ink.

AAA

Usage ratio and UI behavior

70% NEUTRAL / 20% PRIMARY / 10% SUPPORT

- Neutrals carry layout and hierarchy.
- Purple marks identity, focus, and signature work.
- Green and amber communicate state or classification.
- Never use all accents at equal weight on the same surface.

Implementation

The color folder contains JSON, CSS, SCSS, GIMP palette, SVG, and PNG references. Treat design-tokens.json as the canonical machine-readable source.
