

Iconography

A custom core set for the portfolio, designed on a 24×24 grid. Lucide is the approved open-source extension library.

Principles

SQUARE

Square caps and joins echo the logo.

LIGHT

1.75-unit stroke keeps icons quiet beside type.

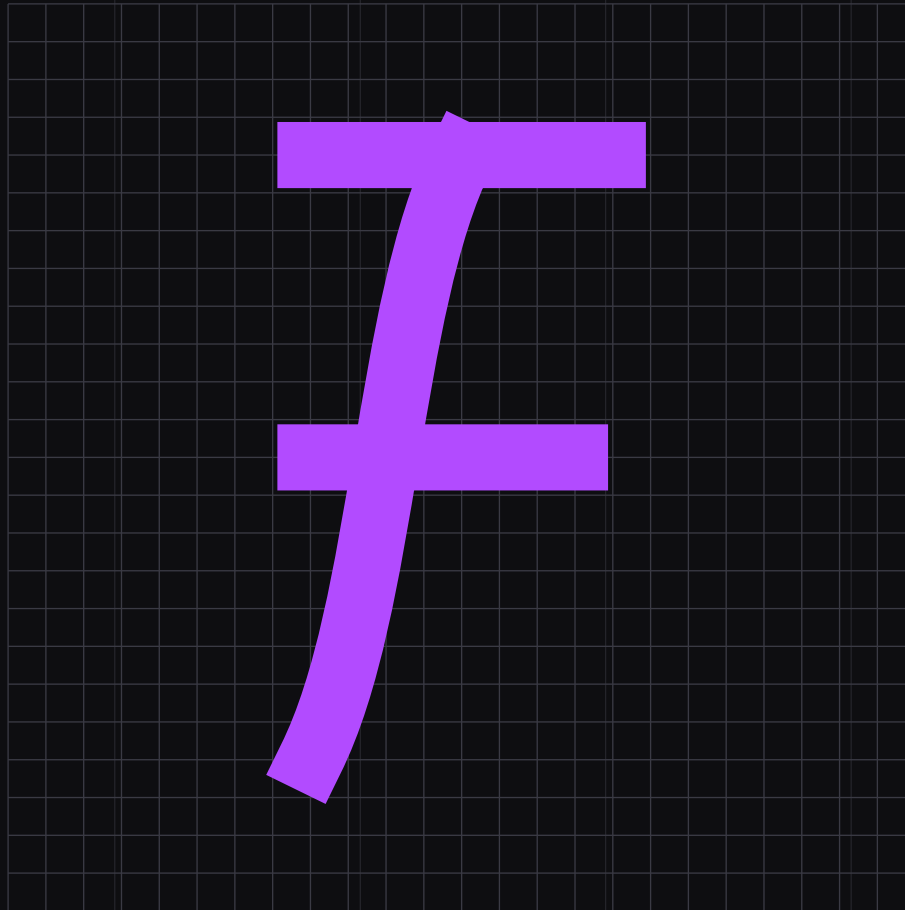

DIRECT

Icons clarify actions; they do not decorate.

SYSTEMIC

Use the same grid, size, and optical weight everywhere.

Construction grid

- 24 × 24 master grid
- 1.75-unit stroke
- Square caps and square joins
- 2-unit optical padding
- Default sizes: 16, 20, 24, 32

- Use ink or text color by default.
- Purple = selected, active, or branded.
- Green = success or validated.
- Amber = exploratory or non-critical warning.
- Red = destructive or critical only.

Side quest

Pair unfamiliar icons with visible labels. Use icon-only controls only when the meaning is universal and an accessible name is present.

Open-source extension

Lucide

Lucide is the approved extension library because it is broad, consistent, SVG-native, and released under the ISC License. Normalize downloaded icons to this system before use.

- Set stroke-width to 1.75.
- Use square linecap and linejoin.
- Keep the 24 × 24 viewBox.
- Remove decorative fills.
- Retain the Lucide license notice when redistributing its files.
