

Brand guidelines

The complete working system for identity, voice, color, typography, iconography, layout, and governance.

The brand in one sentence

Hard ideas, made usable.

Samuel Worash Getaneh is an engineer, mathematician, and game-builder who translates difficult ideas into fast, clear, human artifacts.

POSITIONING

For collaborators, recruiters, learners, and curious builders who value clarity and craft, sami / kmab is a personal maker identity that combines mathematical rigor, frontend fluency, and playful experimentation.

Narrative

Sami learned to notice before he learned to build: pages turning, machines coming apart, patterns in mathematics, differences between people and places.

That instinct became a way of working. Sit with the difficult thing. Understand its parts. Remove what is unnecessary. Build the smallest clear system that works.

The identity therefore balances two modes: sami, the human and reflective voice; kmab, the compressed maker signature. The lambda is the transformation between them.

Core values

01	Clarity before cleverness	Complexity may be necessary; confusion is not.
02	Curiosity with follow-through	Take things apart, then make something useful.
03	Persistence without theater	Keep moving until the problem gives.
04	Human range	Design across languages, contexts, and abilities.
05	Play with purpose	Games and side quests can be serious learning.

Personality

Voice and tone

- Begin with a concrete image, fact, or problem.
- Use short declarative sentences around important ideas.
- Explain technical work in plain language.
- Prefer evidence and outcomes to self-praise.
- Use self-aware humor sparingly.
- Keep racing metaphors as seasoning, not the meal.

VOICE SAMPLE

“I build clean, fast interfaces and small, elegant systems — and the occasional browser game.”

AVOID

Corporate filler, inflated certainty, generic inspiration, unexplained jargon, and metaphors that do not survive literal reading.

Messaging architecture

TAGLINE

Hard ideas, made usable.

DESCRIPTOR

Engineer · mathematician · game-builder

PROOF

Fast interfaces, small systems, games, and commun

INVITATION

Bring the hard problem.

Logo system

PRIMARY / HUMAN

SECONDARY / MAKER

Use the primary for public-facing authored identity. Use the secondary for repositories, tools, games, and compact technical signatures.

Clear space = $\frac{1}{4}$ of the submark height. Minimum lockup width = 120 px. Never redraw, stretch, add effects, or recolor outside the palette.

Color system

Neutrals dominate. Purple identifies. Green validates. Amber explores. Red is reserved for destructive or critical states.

Typography

Inter Display

Inter for readable systems and long-form text.

PT MONO / LABELS / CODE / TIMING

- Display: headlines and wordmarks
- Body: UI and explanatory copy
- Mono: metadata only
- Sentence case by default
- Tight display tracking, generous body leading

Iconography

home

user

code

terminal

function

math

game

book

bookmark

globe

mail

external-link

Use the custom core set first. Extend with Lucide normalized to a 24×24 grid, 1.75-unit stroke, square caps, and square joins.

Graphic devices

TIMING LINES

Use thin grids, split bars, code-like labels, and large areas of negative space. Avoid carbon-fiber clichés, checkered flags, speed streaks, and literal racing graphics.

Layout and composition

- Use a 12-column grid for desktop and 4 columns for mobile.
- Anchor content to strong left edges.
- Let one oversized statement lead each page or section.
- Use 8 px as the base spacing unit.
- Prefer one accent moment per viewport.
- Allow asymmetry, but keep alignment exact.

Digital components

DOWNLOAD CV

SIGNATURE

Gebeta

A browser rendition of the Ethiopian game with turn logic and a compact AI.

PERSONAL BEST

VALIDATED

SIDE QUEST

Accessibility

- Meet WCAG AA contrast for all core content.
- Never use color as the only state indicator.
- Keep body text at 16 px or larger where possible.
- Provide visible focus states using purple plus shape or outline.
- Use reduced-motion alternatives for timing and race-inspired interactions.
- Write meaningful alt text and accessible names for icon-only controls.

KEY CONTRAST

TEXT / INK 16.16:1 · PURPLE / INK 4.90:1 · MUTED / INK 6.93:1

Governance and release checklist

- ☐ Correct logo variant and clear space
- ☐ Approved color tokens only
- ☐ Type hierarchy uses the three defined roles
- ☐ Icons match the 24×24 / 1.75 system
- ☐ Voice is concrete, clear, and evidence-led
- ☐ Contrast and keyboard focus verified
- ☐ Asset filename follows the kit convention
- ☐ Source and license notices retained

Use the PDF guides for human decisions and design-tokens.json for machine decisions. Update both when the identity changes.
